Who We Are

Factory & Trade Counter

We pride ourselves in offering self-manufactured PVCu windows and doors, meaning that our products are made right here in our Plymouth factory.

We produce hundreds of high quality windows and doors every week, specifically tailored to the needs of each individual development.

Background

Right Price PVCu Limited is a family run, independent business, manufacturing, installing and supplying the highest possible standard of PVCu products.

We work with several national house builders on new build developments across the South West, including one of the largest eco villages in the area.

Product Range

In our selection, you can find all the most popular solutions by house builders, including PVCu residential and French doors, as well as aluminium bi-fold and composite doors. When it comes to the windows, we deliver all the most widely selected options, providing A-rated, highly energy-efficient casement and tilt-and-turn windows, meeting all the latest Building Regulations. If building a timber-frame, we also fabricate bespoke Cavity Formers.

Accreditations

Giving you reassurance of the quality of our products and services, we have been accredited by several acknowledged independent parties.

Have a look at all our accreditations

Our windows and external doors comply with the requirements of PAS 24, BS6375, EN 14351, and therefore, the UKCA Mark.

The company is accredited on a range of aspects, from financial to operational processes, including health & safety, environmental management, quality management, equal opportunities and diversity and policy on Building Information Modelling, among others.

The company's health and safety processes meet excellent standards and are in compliance across all areas of risk management.

Right Price meets excellent Health & Safety standards, being assessed on its health and safety policies and organisation for H&S, training, information, and welfare provision.

Right Price is registered in the CQMS Safety Scheme, meeting the health and safety 'core criteria' which is recognised and trusted by 100's of buyers.

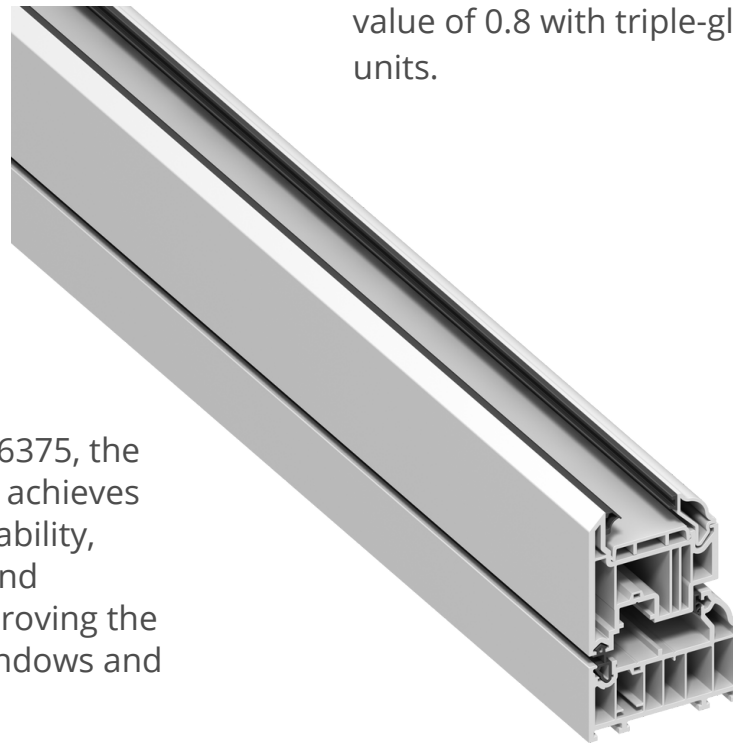

The company is registered with Builder's Profile, providing compliance with health and safety and insurance requirements, and PQQ information to the construction industry.

Our windows and doors are manufactured using Eurocell profile

Excellent Weathering Performance & Energy Efficiency

This profile system is provided with a six-chambered outer frame, which results in exceptional thermal insulation and draught-proofing.

In compliance with BS 6375, the profile's gasket system achieves outstanding air permeability, water tightness and wind resistance, further improving the energy efficiency of windows and doors.

What's more, the profile provides the ability to achieve an energy rating of A+ (in case of double-glazed units) and A++ (in case of triple-glazed units) based on the rating of Window Energy Ratings (WER).

With this product, a U-value of as low as 1.2 can be achieved with double-glazed units and a U-value of 0.8 with triple-glazed units.

High Security

Selecting our products, you can rest assured that your home is protected by robust and durable materials. Our profile system is accredited on their high quality and safety by

- British Board of Agrément (BBA)
- British Standards Institute (BSI)
- Association of Chief Police Officers' (Secured by Design)

What's more, our windows have been designed to deter burglars and secure properties against forced entry; all of our windows are internally beaded — the glazing units cannot be removed from the outside.

Moreover, our windows and doors are tested to the standards of PAS 24 and can be manufactured with the most innovative security hardware on the market, including shoot bolts, locking handles, heavy-duty security hinges and hinge guards, among others.

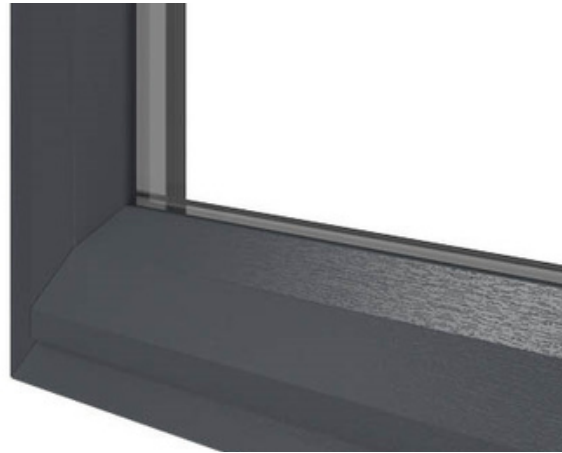

PAS 24 security testing of Right Price products

Three Different Styles

To fit the needs of every project, our profile system is available with different styles of frame and beading.

Chamfered is a straight-edge style option providing a contemporary style to your window.

Ovolo has a sculptured beading, which makes it look more traditional.

Latest Style

Now, there's a third option to select from.

Our latest flush sash offers a modern design in accordance with the latest trends, offering a perfect choice for new build developments.

When closed, the window sash is level with the outer frame, presenting a smooth and even surface and clean lines.

Flush sash is designed to be used with frames with a standard 70mm depth.

Casement Windows

Casement window is the most popular and widely used window type in the UK. They can be hinged at the top or the side depending on your needs. Their sleek, simple design makes them suitable for most types of property.

We offer a range of different window types to suit any building and project.

Tilt and Turn Windows

Tilt and Turn is a modern window style, which is becoming more and more popular. They can be fully opened inwards like a side hinged casement window for safe any easy cleaning or can be tilted inwards on a bottom set of hinges for simple ventilation.

Window Handles

Cranked, in-line and tilt and turn handles are available in left- and right-handed options as well as in a wide range of finishes.

- 10-year mechanical guarantee
- 10-year surface guarantee
- BBA accredited

We use high quality hardware on all of our windows.

Friction Stays and Hinges

Top hung, side hung, egress easy clean and egress only, mega egress, heavy duty, tilt and turn and a range of restrictor options are available to select from depending on the needs of your projects.

All our windows are manufactured with highly durable locks, such as PAS 24 and Secured By Design certified twin cams and BBA accredited espagnolette locks.

Espag Locks

In addition to twin cams, our PVCu windows are also offered with a selection of espagnolette locks.

They are available in a variety of length options, including 240mm, 400mm, 600mm, 800mm, 1000mm and 1200mm. They are offered with 22mm back set and 8mm cam height.

Quad Lock Twin Cam Rods

Our PVCu windows are offered with Quad Lock high security locks with twin (bi-directional) cams, maximising product performance. You can select from 7.7- and 9-mm cam heights, as well as 20 and 22mm back set variants.

What's more, offset/easy reach variant is also available.

French Doors

French doors are a great choice for conservatories, balconies or a living area leading to the garden.

You can select from a range of colours, finishes, and sizes. What's more, you can select inward or outward opening French doors, as well as offset (one door is bigger than the other) or standard 50/50 split doors.

We manufacture all PVCu single and French doors to the needs of each individual project.

Residential Doors

PVCu single doors provide back and garage personnel door solutions for the needs of every development, being available in a wide range of colours and styles, as well as with a choice of hardware.

Our PVCu doors are offered with a carefully selected range of hardware.

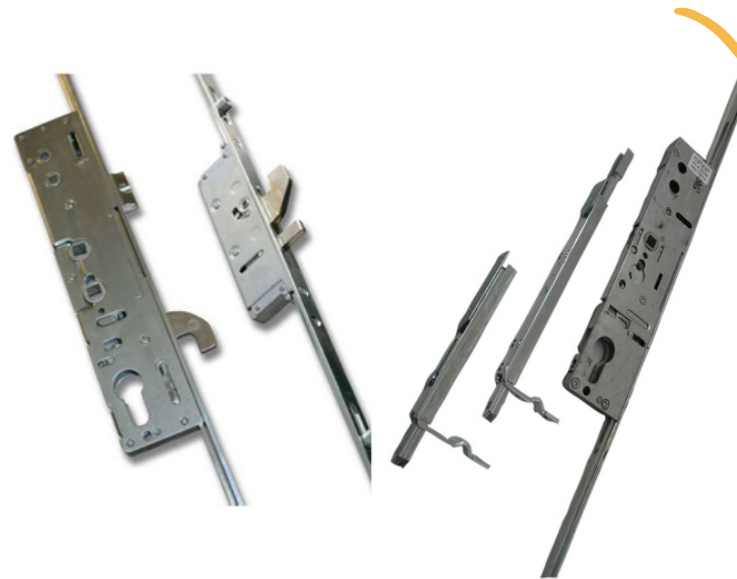

Door Handles

Our wide selection of door handles includes highly accredited and durable products from the most trusted names, including a variety of Trojan and Quantum handles.

You can choose from in-line lever/lever and lever/pad options, as well as a range of finishes, including white, black, chrome, gold, satin, silver, flint, tungsten and grey.

Door Locks

Our collection of door locks for PVCu doors is provided by market leading manufacturers, such as Yale, and are Secured by Design and PAS 24 certified.

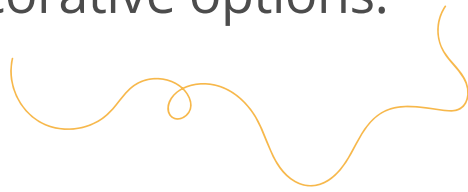

Letterplates, Numerals and Knockers

PVCu front doors are offered with a selection of letterplates, numerals and knockers offering you a variety of options to mix and match.

All our products are available with a wide range of glazing options, including double, triple and toughened glass, and a variety of decorative options.

Insulated Glass Units

When selecting our PVCu windows and doors, you cannot only choose from three styles of frames but also from a range of glass options.

Our insulated glass units provide high-quality solutions with low emissivity coatings. They can be made up of either two or three panes of glass (double or triple glazed), its internal cavities being filled with air or gas, as well as moisture adsorbent desiccants.

Double Glazed Units

A-Rated, double glazed units consist of 4mm Pilkington K Soft Coat to inner pane, 20mm Thermobar Warm Edge Spacer Bar, Argon Gas filled to centre and 4mm Low Iron clear pane to outer leaf. Pilkington K is the market leader, allowing our units to obtain optimal solar heat gain, thermal insulation and light transmission to provide the highest Window Energy Rating (WER) performance, reducing energy bills and the use of artificial lighting. Glass will be Toughened Safety glass where required.

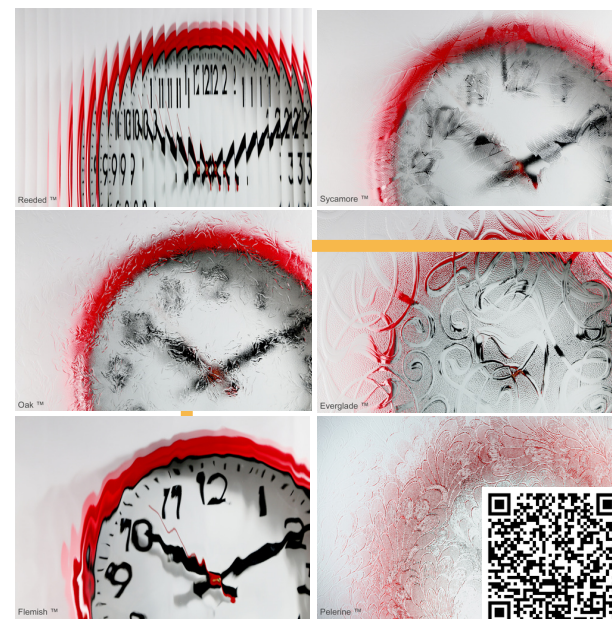

Triple Glazed Units

We offer a thicker unit to allow more airgap between the glass, to give a u-value of up to 0.8. Triple glazing, also has the added benefit of blocking much more noise out of the room, and also adds extra security.

Our selection of Pilkington obscure glass offers distortion options ranging from very slight to complete hiding, and a wide range of textures and patterns.

Scan QR for the full range

Special Glazing

Our collection of special glazing options consists of toughened safety, laminated safety, climate and acoustic glass.

Decorative Glazing

In addition to obscure glass, our selection of decorative glazing includes Georgian bars, Astragal bars, and a variety of leaded and bespoke options.

This door system offers above ground bottom running with multiple threshold options.

The hardware components and system are bespoke designed to give maximum carry capacity, whilst offering slim sightlines, oversized doors and minimum profiles.

This system can accommodate up to 14 sashes and both inward and outward opening options.

We offer aluminium bi-folding doors tailored specifically for each individual new build development.

Security Test

(PAS 24): Passed

Our composite front doors offer maximum energy efficiency, style and security, suiting every development.

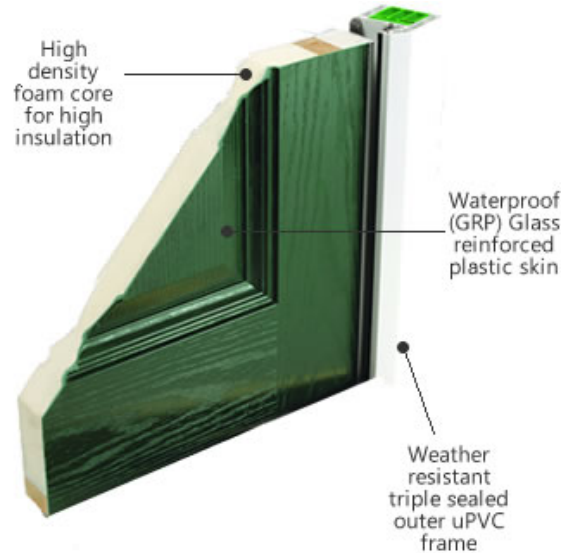

Maximum Security

Our composite door range has a rigid polymer subframe and a high density CFC-free polyurethane foam core, which offer excellent strength, and a highly durable Glass Reinforced Plastic (GRP) surface which is an extremely tough and impact-resistant material.

What's more, these composite doors are also provided with a five point locking system and an anti-snap, bump, pick and drill cylinder fitted with a guard for ultimate security.

They are all PAS 24 and Secured By Design certified.

Outstanding thermal efficiency

The warm core offers excellent thermal performance and allows the door to have a significantly better U-value than traditional timber doors, PVC skinned timber doors and steel doors.

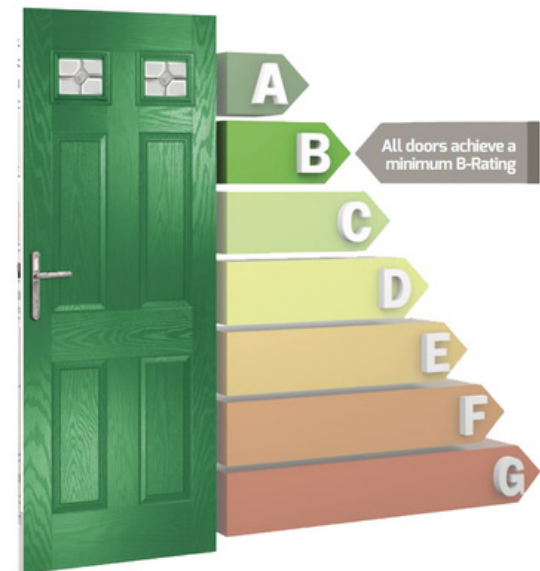

These composite doors meet all the current Building Regulations.

Excellent weathering performance

The composite doors are built to resist any any extreme weather;

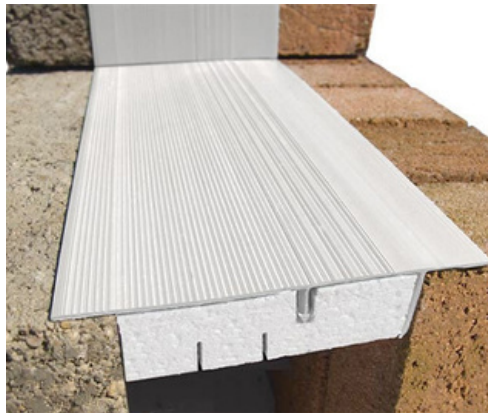

The water proof skin and triple sealed uPVC outer frame protect the doors from swelling and sticking.

The GRP skin protects the doors from fading, cracking and warping.

Cavalok Cavity Closers

Cavity closers are important elements of any new build development, protecting from water ingress, damp, heat loss and condensation. That is why we supply them for new build developments across the South West.

Trade Closer

Trade Closer can be used for cavities of 50-100mm and is perfect for refurbishment projects. It provides a high thermal performance insulating and sealing cavities around windows and doors in existing walls.

Big Blok Cavity Closer

The BigBlok Cavity Closer and Frame Acceptor System is suitable for use in masonry walls with nominal cavity widths ranging from 125 to 300 mm and is compatible with PVCU, timber, aluminium, steel and composite window and doors. The system can also be used in timber-framed and steel-framed buildings. This product closes opening with continuous CFC/HCFE-free insulation, reducing U-values to prevent thermal bridging. In addition, it is super-insulating and has been designed specifically to meet the need of zero carbon.

Structural Closer

Structural Closer can be used for doors and large window openings of 100mm. The former is filled with structural foam inserts, providing you the ability to directly fix through the outer door frame into the cavity closer, removing the reliance on strap fixings. This way, any movement can be reduced after installation. They are mainly used on front, back and French doors.

Frame Blok

FramleBlok is a combination of a cavity fire barrier and a cavity closer former. This product serves as a ring of fire protection around openings in cavity walls, providing more than a 60-minute fire integrity and insulation. Unlike other traditional methods of closing cavities, such as battens in timber frame or returned brickwork, FrameBlok is provided with a very high thermal performance. It is manufactured from recycled PVCu and is suitable for cavities greater than 100mm, and up to 150mm.

Scan QR for more information on our cavity closers.

Hybrid Cavity Closer

Hybrid Cavity Closer provides a solution for wider sized cavities up to 300mm. Its new and advanced insulating foam technology allows the loading of heavy A rated windows directly over cavity. Being reinforced with steel for inner and out leaf support, it provides reduced air leakage with the option of a four sided closer at the head.

Pride In The Job

Right Price has been a key contractor in several sites which have been awarded 'NHBC Pride In The Job Award'.

This award recognises and celebrates the UK's best practice and excellence in home building, providing a benchmark for exceptional sites.

Let's see our involvement in some of the award winning sites.

When assessing the sites, the judges look at different aspects of the build, with windows and doors being a vital part of the assessment. The products are assessed for quality, and their ability to provide appropriate weather resistance. The windows and doors are also judged for the quality of installation and finish, thoroughly checking that all items are installed to the correct specification and to a high standard of finish.

On all sites, Right Price manufactured, supplied and fitted quality windows and doors for hundreds of new build homes, to the highest possible standard – helping the sites achieve these prestigious awards.

By conducting a detailed assessment of all aspects of construction, 'Pride in the Job' gives customers reassurance of the quality of their new build homes, and we are proud to be part of the team that has delivered this to happy customers once again.

Case study: First class development in Exeter

We have been part of the development of this excellent collection of 2-,3- and 4-bedroom homes in Alphington, Exeter.

For the protection of the new buildings against water ingress, damp, heat loss and condensation, we supplied cavity formers with excellent thermal performance.

Our team manufactured and installed in grey French doors and windows, using logik profile system in the frame style called Ovolo, which has a sculptured beading, providing an elegant look to the new homes.

These products were supplied with toughened glass, which is a type of safety glass in accordance with BS-EN 12600 specifications. In addition to providing excellent safety features, such as protection against deliberate attack, this glass has high thermal stress resistance.

Case study: Premium new homes in the historic Tavistock

We are proud of having been involved in the building of this breathtaking collection of 2, 3, 4, and 5 bedroom homes in the historic market town of Tavistock.

For this project, we supplied cavity formers and aluminium bi-folding doors, and manufactured a range of French doors and casement windows using Eurocell logik 70mm profile. The profile system is created with thermal inserts, which provide an energy efficient solution and thermal performance.

The doors are offered with a variety of threshold options and with the choice to open in or out. In terms of safety, they are all PAS 24 tested and Document Q compliant. In addition, they are also BS6375 Weather Tested providing excellent air tightness, weathering performance and energy efficiency.

Right Price works in compliance with all Building Regulations.

Scan QR for more information on Building Regulations.

Building Regulations specifically relate to the technical aspects of construction and cover such matters as structural stability, fire resistance, means of escape, disabled access, weather resistance, thermal insulation, drainage etc.

Building Control is the part of Environmental Services which ensures that buildings are constructed and altered so that they comply with the Building Regulations, that dangerous structures are made safe and that demolitions are done in as safe a manner as possible.
